

S.No	Project / Paper Name	Main Objective	Technique Used	Dataset	Reported Accuracy / Performance	GitHub /Paper Link
1	AgriGuard-AI Crop Disease Detection	Detect crop leaf diseases from images	CNN, Deep Learning	PlantVillage	~95% accuracy	Link
2	FourCropNet (Research Paper)	Multi-crop disease classification	CNN (Custom Architecture)	PlantVillage (Grape, Corn, Potato)	99.7% (Grape), 99.5% (Corn), 95.3% (Combined)	Link
3	MobilePlantViT	Lightweight disease detection for mobile/edge devices	Vision Transformer (ViT)	PlantVillage + Custom Sets	80% – 99% (crop-dependent)	Link
4	STA-Net	Resource-efficient plant disease classification	CNN + Attention	PlantVillage	~89% accuracy	Link
5	Crop Recommendation Neural Network	Recommend suitable crops based on soil & climate	Neural Network (DL)	Soil + Climate Data	~98% accuracy	Link
6	Precision Agriculture using ML	Crop recommendation & yield improvement	Random Forest, SVM, NN	Kaggle Agriculture Data	92%-97% (varies by model)	Link
7	ArogyaKrishi	Disease detection + crop advisory	CNN + ML classifiers	Leaf Image Dataset	~93% accuracy	Link
8	Crop Yield Prediction (Survey + Models)	Predict crop yield using historical data	Regression, ML Ensembles	Weather + Soil Data	$R^2 \approx 0.85-0.92$	Link
9	Stacking Ensemble Crop Recommendation	Improve crop selection accuracy	Ensemble ML (Stacking)	Agricultural Sensor Data	~99.5% accuracy	Link
10	Digital Agriculture Datasets (Benchmark)	Provide datasets for benchmarking	Dataset Repository	Multiple datasets	Used in models achieving 90–99%	Link
